**Industry-Leading Benefits of Trane Performance Climate Changer™ Air Handler  
Now Available in Weatherized Outdoor Version**

*Only catalogued industry solution allowing stackability for minimal investment in  
roof reinforcement*

**St. Paul, Minn., Oct. 4, 2011** – Trane now offers the industry-leading capabilities of the Performance Climate Changer air handler in a weatherized outdoor version for customers who prefer or require exterior installation.

The outdoor Performance Climate Changer air handler from Trane, a leading global provider of indoor comfort systems and services and a brand of Ingersoll Rand, is the only catalogued air handler in the industry offering stackability. This allows users to invest in a minimized structural support footprint for rooftop installations.

The outdoor air handler offers the same benefits as the indoor unit, including superior performance, industry-leading energy efficiency and lowest installed cost.

“Customers who prefer or require outdoor installation of their air handling units can now benefit from the superior capabilities of the Performance Climate Changer air handler,” said Gina Cottrell, airside business leader for Trane in North America. “The unique stackability of this solution can produce significant savings for customers who need to invest in structural support for rooftop installation.”

The Performance Climate Changer air handler includes design input from more than 1,000 customers and a significant investment in manufacturing technologies. Trane Performance Climate Changer air handlers combine the best features of a standardized, packaged air handling system with much of the flexibility and many of the features of custom installations.

This highly flexible unit is designed to provide a clean, comfortable environment in commercial, industrial and institutional buildings.

Performance Climate Changer air handlers meet the strictest of industry standards and are the most energy-efficient units in their class, minimizing energy and operating costs.

With innovative casing design, factory-installed controls and a menu of advanced, energy-saving options, these air handlers clean, filter, dehumidify, and heat and cool air, playing a key role in optimized heating, ventilation and air conditioning (HVAC) systems.
