

BUILDING AUTOMATION AND CONTROLS

PROVIDING INTEGRATED COMFORT SOLUTIONS

WHY TRANE CONTROLS?

Trane is the most trusted name in the industry with over 30 years of proven experience in building automation controls and more than 40,000 installations in North America alone...and still growing! As your solutions partner, we will work with you to design, install, program and test all building automation and integrated controls systems to ensure consistent and efficient operation. With Integrated Comfort System technology, Trane can bring together all components of your system – equipment, integrated unit controllers, and building management – for a customized solution designed for your application.

HERE ARE SOME OF THE BENEFITS YOU CAN EXPECT:

- Total systems solutions provider to deliver “*High Performance Buildings for Life*”
- Building and system optimization that SAVES ENERGY AND MONEY!
- Convenient remote operability through the internet – anytime, anywhere
- Pre-engineered, pre-tested factory installed controls
- Reliable factory installation reduces construction timelines
- Trane can integrate with virtually any building management system
- Trane controls can work with other building systems, such as security, fire alarm, etc.
- Single source responsibility – no finger pointing
- Trane controls systems support the industry’s non-proprietary and open standard protocols
- Easy to learn & easy to use with customizable graphics
- Users’ network provides training, support and upgrades to keep owners and operators up-to-date
- Strong support from local Building Automation Specialists
- 37 LEED Accredited Professionals available in our Trane district alone to assist you in designing your ENERGY-SAVING controls system
- Available service for building controls to ensure the peak health of your system

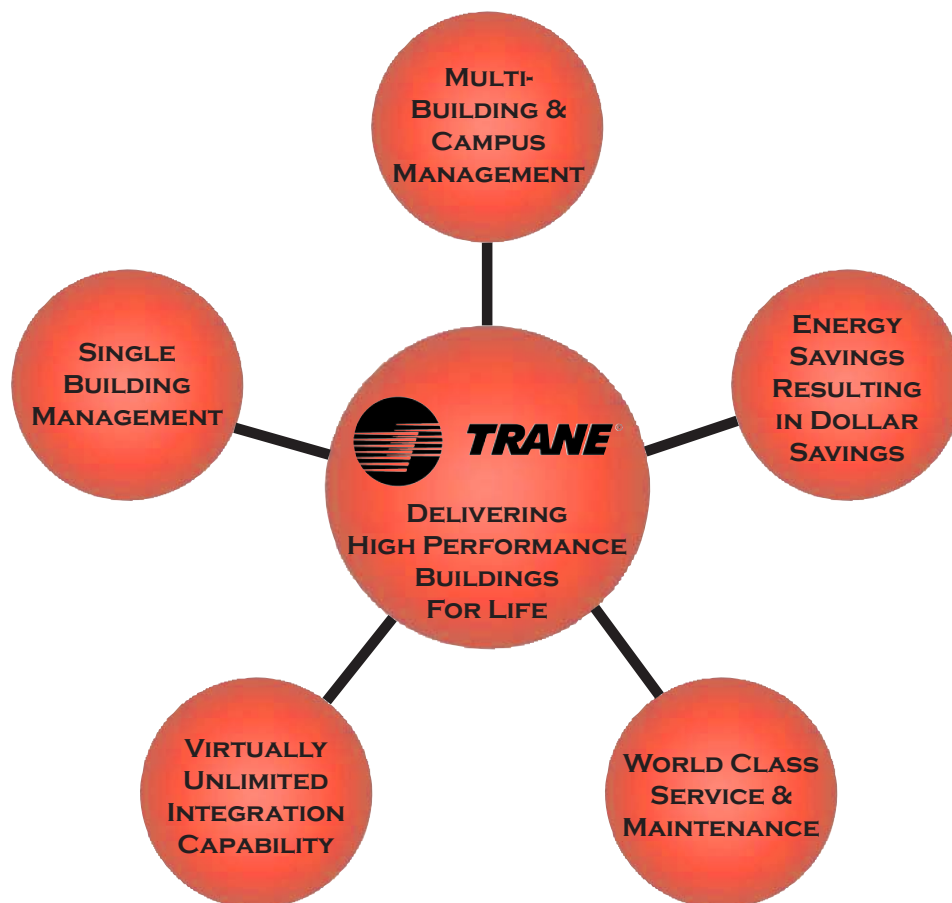

NEED TO INTEGRATE?

Trane integration can save you money by reducing the need for replacing multiple systems. Our controls systems allow us to combine integrated control, supervision, data logging, alarming, scheduling, and network management functions with internet connectivity and web serving capabilities in a small, compact platform. This makes it possible to control and manage external devices over the internet and present real time information to users in web-based graphical views. In addition to increasing accessibility to your building automation system with a convenient, easily installed solution with one graphical front-end, you can also view the graphics for a facility, change set-points, and perform overrides on multiple systems.

CONTROLS MAINTENANCE

Controls maintenance has become an invaluable service in today's technology based systems. Just like other elements of your building, controls need maintenance. This requires that controls be serviced and maintained in a manner that keeps them functioning properly to minimize downtime, reduce energy consumption, and improve building comfort. But it is more than just about servicing and maintaining the equipment – owners have a direct route to controls people who can provide service to them along the way with systems technology upgrades, and much more.

TRANE - GEORGIA / ALABAMA DISTRICT
