

FLEX

Modular Air-cooled Chillers and Air-to-Water Heat Pumps

R410A R454B

Cooling capacity 50-130 kW
Heating capacity 55-130 kW

TRANE
TECHNOLOGIES

Flex II

Unit description

- Tandem scroll compressors for high part load efficiency
- Condensing and evaporating pressure control with fan speed modulation
- Microchannel condenser coil with very low refrigerant charge (chillers only)
- Waterside plate heat exchanger with differential pressure switch and antifreeze protection electric heater
- Electronic expansion valve
- Casing and panels in painted galvanized steel

Factory-mounted options

- Partial or total heat recovery (chillers only)
- Low noise or super low noise
- EC fans
- High static pressure EC fans, up to 100 Pa
- Hydraulic connection kits
- Pump sets with different pressures and available with variable speed drive
- Power factor correction
- Low ambient temperature kit in cooling mode (down to -10°C)
- Low ambient temperature kit in heat pump mode (down to -15°C)
- E-coated anti-corrosion condensing coils on chiller version
- Hydraulic module anti-freeze protection down to -20°C ambient air temperature

Accessories

- Serial card with BACnet protocol MS/TP or TCP/IP
- Gateway Modbus Lontalk
- Remote control display
- Signal amplification card
- Flow switch
- Automatic water filling
- Water strainer
- Water gauges
- Rubber or spring anti-vibration mounts
- 3-way valve for hot sanitary water including controls and power supply (heat pumps only)

Controls

- Microprocessor-controller to manage on/off mode, operating mode, parameters setting, and error code display
- Modbus communication card RS485
- **FlexMaster controller** (optional)
 - Connect up to 6 Flex of equal or different capacities to one single master controller
 - Easy connection and specifically designed for modular capacity expansion of the chiller and/or heat pump plant
 - Controls the main functions, operating modes of the units, and hydraulic kit of external water pumps or water pumps integrated in each unit
 - Allows for continuous operation: in case of maintenance on one Flex unit, all other units keep on running

Ultimate flexibility

Up to 6 units can be combined into one system in order to reach the required capacity

Flex II's modularity is perfect when an extension of capacity becomes required as the building cooling and/or heating demand evolves, or when the HVAC plant is designed with multiple staggered chillers and/or heat pumps to fit in complex or limited (roof)space.

*Optional kit includes hydraulic manifolds for inlet and outlet water, the water strainers, the flow switch, motorized shut off valve and non-return valve to isolate unit in case out of operation.

Flexible investment

The scalable system can be extended on site, in terms of number of units (maximum 6) and total available capacity.

Non-stop continuous operation

The multiple units activation and the specially designed control system allows the system to always be reliable and operational.

In case of failure, maintenance or repair of one system unit, the rest continue to work to ensure the reliability of the system.

In comparison with a packaged unit, the addition of just one module can guarantee the total power back up in case of failure.

Quiet operation

Super low noise, including: condensing control with fan speed modulation, oversized coils, muffler on the compressors delivery lines and soundproof box for the compressors and Axitop diffusers.

The innovative fan profile ensures the highest energy efficiency in combination with low sound emissions.

Easy to handle

Trane Flex units can be easily lifted and moved, and fit through doorways and into standard elevators, which make them a perfect choice for challenging replacement projects in older buildings and confined spaces.

General data

FLEX II heat pump R454B

(1) Cooling: outdoor air temperature 35°C and chilled water temperature 12/7°C.

(2) Outdoor air temperature 7°C with 90% R.H. - hot water temperature in/out 40/45°C.

(3) Cooling: outdoor air temperature 35°C and chilled water temperature 23/18°C.

(4) Outdoor temperature 7°C 90% R.H. - hot water temperature in/out 30/35°C.

(5) Ecodesign rating at low temperature conditions. Outdoor temperature: 7°C dry bulb/6°C wet bulb and hot water temperature in/out: 30°C/35°C. η_{s,h} / SCOP as defined in Directive 2009/125/EC of the European Parliament and of the Council with regard to Ecodesign requirements for Space heaters and combination heaters with Prated < 400kW - COMMISSION REGULATION (EU) N° 813/2013 of 2 August 2013.

*(6) Ecodesign rating for comfort chiller - Fan coil application.

Outdoor air temperature 35°C and chilled water temperature in/out: 12°C/7°C. η_{s,c}/SEER as defined in Directive 2009/125/EC of the European Parliament and of the Council with regard to Ecodesign requirements for Comfort Chillers with 2000 kW maximum capacity - COMMISSION REGULATION (EU) N° 2016/2281 of 20 December 2016."

(7) Refrigerant charge values are not binding, please check the effective quantity of refrigerant shown on unit nameplate.

General data

FLEX II chiller R410A
