*Industry Leader ○ Company in Invited Universe ● Member of DJSI

INDUSTRY DRIVERS

The machinery and equipment industry consists of companies engaged in the production of machinery or equipment for sale to business for use in their manufacturing activities and it is designed to help improve customers' productivity. Companies' ability to innovate through product development has always been a key determinant of competitiveness, but it is becoming even more important as competition from emerging market companies intensifies. This is compounded by growing resource scarcity, which is spurring the need for improved resource efficiency, particularly energy and water efficiency. Leading companies are increasingly using life cycle analysis to deliver cost-savings and reduce environmental impacts for their customers. Upholding business ethics in their own operations as well as in their supply chain is essential to protecting their license to operate. The most successful companies in the industry have recognized the strategic importance of sustainability for their business models and are increasingly incorporating sustainability into their core strategic decision-making.
