

Trane Tracer Ensemble Scheduling Services

Your enterprise-wide building management solution

Are you struggling with after-hours requests? Trane Tracer[®] Ensemble[™] Scheduling Services allows building owners to tie scheduling requests directly to their building control system for enhanced energy management. Your system can respond 24 hours a day to inquiries for after-hours control of heating, ventilating, air-conditioning (HVAC) and lighting in specific areas of a building — resulting in improved comfort. Enable, record and invoice individual groups or organizations for after-hours use of their space with Tracer Ensemble software.

A smart business decision.

Building management using the Trane Tracer® Ensemble™ system offers many business advantages. You can improve productivity through automatic tracking, as you reduce equipment use and realize greater energy savings through more efficient scheduling. Plus you can make your occupants more aware of their energy use, while also empowering them to control the comfort level of their environment — preserving capital equipment and spending less time entering scheduling overrides.

Managing your buildings with a Trane Tracer Ensemble system has numerous advantages:

- Installation is easy using plug-and-play setup for Trane legacy or new controls.
- System flexibility lets you customize normal hours, minimum overrides and usage rates for each area.
- Users can log in on their mobile device and enter their own requests for both immediate and future needs.
- Users can choose the duration and the area or areas they wish to request.
- Usage reports can be customized and exported for each group or organization.
- Users and property managers can receive email acknowledgments for all requests.
- Users can enter comments to record why the request was made.
- Users can be given the option to change the comfort setting on the areas for which they have access directly from their user interface.
- Tracking options include requested hours, meter usage, and fixed charges.

Easy setup and operation

The Trane Tracer Ensemble system offers a fully integrated scheduling solution that sets up easily to deliver optimized building control and comfort for users, while enabling building owners to increase building efficiency and allocate operating costs based on use.

After-hours management and audit trail

Users now have scheduling flexibility, enabling them to request added service beyond their regular needs. And building owners have an audit trail, allowing them to see which user made the request, date, time and duration of the request, usage generated, and more.

User interface

A simple, mobile-friendly interface allows users to make requests for immediate and future service from any device. This empowers users to easily control the comfort of their space, improving satisfaction.

Built-in tracking

Scheduling Services has usage reports and tracking built directly into the application. Since it is not a third-party add-on solution, it offers building owners convenience, speed and accuracy.

Security

Tracer Ensemble can be installed on a customer's network or be purchased as a cloud-based service. Users receive secure and limited access to only specific areas of the building and must provide their username and password before making a request or change.
