

## *Trane<sup>®</sup> Utility Bill Management powered by dataPoint<sup>®</sup> Identifying opportunity through accurate data capture*

Trane Energy Supply Services uses dataPoint, a Utility Bill Management software platform, that provides users with organization and validation of their energy data. This software provides the cost, usage and demand data, and the reporting you need to more accurately predict and control your energy costs.

### **Accurate Data Drives Energy Savings**

If you are an energy user, you can realize significant cost savings when you are able to leverage more accurate data in making more informed energy decisions. This is possible with dataPoint because it produces energy and environmental data through invoice validation. This process helps you achieve a higher level of accuracy of all your data, not just the payment information.

## Turn Data Into Dollars

dataPoint® is a password-protected, web-based system that is available to you 24/7. The system leverages energy data acquired from your utility and supply invoices, and then audits and validates it prior to being posted to the dataPoint website within 24 – 48 hours.

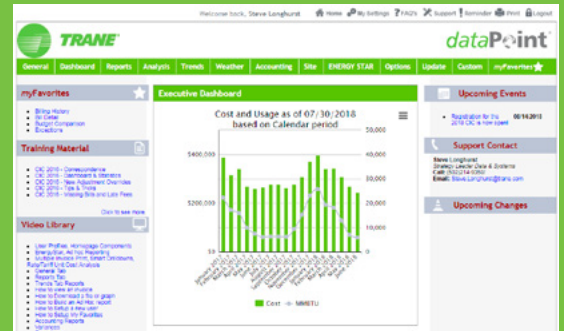

- **Automated Reporting** creates and auto-generates reports to meet your needs.
- **Bill Pay** consolidates and pays bills to help you virtually work to avoid late fees.
- **Validation** uses a multi-step process to ensure the integrity of captured information
- **Variance** test tolerance limits are user defined and applied down to the account level.
- **ENERGY STAR®** - Trane automatically integrates with the Portfolio Manager® tool to connect simply and track building performance, removing manual data entry.

## Bill Pay, Tracking and More

With dataPoint, Trane energy professionals use your energy and environmental data to help you meet your business goals. This approach is much more than just paying bills and posting data to canned reports on a website. Most reports can be easily emailed or downloaded to Excel for further analysis and manipulation.

We can track and gauge all of your electricity and natural gas usage, including costs and savings. The system can also be used to track other utilities including water, sewer, fuel oil, waste and telecom invoices, as well as any reoccurring invoice. Emissions can also be tracked in the system including; CO<sub>2</sub>-e, NO<sub>x</sub>, SO<sub>2</sub>, SH<sub>4</sub>, PM<sub>10</sub>, N<sub>2</sub>O, CO<sub>2</sub>, VOC, CO, HFC, PM – filterable and PM – condensable.

For enterprise-wide energy strategies, dataPoint offers you the ability to group different sites, which enables unique grouping functionality for site comparisons, analysis and benchmarking at the site or regional level.

## Easy Navigation Home Screen:

Trane Utility Bill Management powered by dataPoint is an agile and simple software system that adapts to your business needs.

## Full Detail Invoice Capture:

PDFs of all invoices are captured and information is uploaded for effective strategy, forecasting and benchmarking.

## Custom Reporting:

Energy Supply Services gives you the ability to create ad hoc reports that provide valuable information.
