

### Increase operational control: Upgrade to the Tracer™ TD-5

Work smarter with the Tracer TD-5, a large, easy-to-read color touchscreen display that delivers important system information at a glance. Use this display to easily diagnose issues by viewing alarms, trending information, and reports. Has your ReliaTel board gone down? Take advantage of the opportunity to upgrade now!

#### Features

The Tracer TD-5 touchscreen display operates with the ReliaTel controller.

The display allows you to view data and make changes on the following applications:

- Voyager™ rooftop air conditioner
- Precedent™ packaged air conditioning unit

The TD-5 can also be used to view a variety of reports, as well as create and edit custom reports. You can also use the controller to compare current information with past performance to spot potential problems as early as possible.

Users can also download data and save that information to a USB device for further analysis, allowing them to use spreadsheet software they are comfortable with on their own computer.

**Save time on the roof  
by fixing the right  
part the first time.**

#### Benefits

The TD-5 offers many advantages:

- Save time on jobsite
- No time-consuming decoding of error messages is necessary: The ReliaTel board has LED flashing lights that show error codes when there is an issue. The TD-5 clearly displays active and historic alarms on the screen in an easy-to-understand way, simplifying and lessening the time spent troubleshooting.
- Easy upgrade during a failed ReliaTel board replacement
- Simplified installation and programming
