

CUSTOM PERFORMANCE CLIMATE CHANGER PSCA AHUs

Outstanding performance and the flexibility
to fit any building space requirement

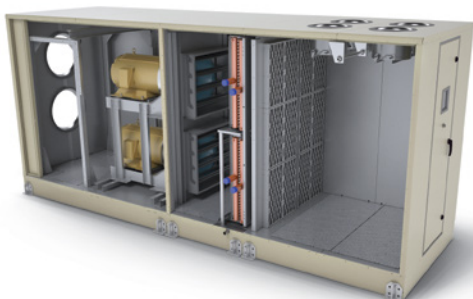

Performance Climate Changer® air handling units (AHUs) deliver energy efficiency, superior performance and one of the lowest installed costs in the industry. The PSCA model utilizes a common platform for both indoor and outdoor units. It is highly customizable due to dimensional, casing and component flexibility; offers numerous integrated controls options; and delivers proven performance.

Custom Flexibility

Performance Climate Changer PSCA AHUs are among the most versatile air handler solutions on the market, giving you the flexibility to meet tight mechanical space constraints or critical application needs. Casing options include 3-inch R-19 foam-injected wall panels and premium doors; and variable length sections meet desired performance, configuration and service needs. Component options offer further opportunities for customization. These include door options, direct-drive fan arrays, motorized impellers and many others.

Performance

With robust casing construction, component redundancy and smart controls, the Performance Climate Changer PSCA AHUs provide an efficient solution in the air handler market. Robust casing construction results in low panel deflection. And the casing, including the unit base, has no-thru-metal with mid-span thermal break panel construction. Our industry-low leakage rates meet ASHRAE® 111 Class 6 for leakage — your assurance that energy will not be wasted and conditioned air will be delivered to the intended space.

Mobile TOPSS Selection Tool

To make your ordering process easier than ever, Trane Performance Climate Changer PSCA is now available through Mobile TOPSS®. Our web-based selection software delivers significant speed improvement in time to get a PSCA unit layout. The updated process has an integrated sizing screen to get the most cost-effective aspect ratio based on job requirements. Enhanced outputs and reports are intuitive and easy to read. The new Mobile TOPSS program improves efficiency and accuracy in your selection process.

Streamlined Purchasing

Simplified selection and ordering processes combine with industry-leading factory lead times to ensure hassle-free delivery of Performance Climate Changer PSCA AHUs. If you need your custom air handler fast, take advantage of our fast ship cycles that can often be further reduced upon request.

Serviceability

The PSCA AHUs have optional features that make servicing easy, and they're backed by the expertise of the Trane service network. Features include movable Marine LED lights that can be re-positioned to illuminate the work area. A removable panel aids in coil pull for repair or replacement, and a motor removal rail option makes motor replacement effortless.

Simplified Installation

- Save commissioning and install time with our offering of factory-engineered, installed and validated controls.
- Realize cost savings through single-point power. With only one electrical connection, the PSCA AHU makes it simpler to accommodate retrofit opportunities and also reduces leakage.
- Your design phase becomes more efficient by the selection process using BIM models to ensure accurate dimensions and technical detail.

Industry-leading performance features

Redundancy

Direct drive fans can achieve N+1 redundancy at 10 inches of static. Fans are available with optional backdraft dampers to prevent air from recirculating through a failed fan.

Controls

The PSCA AHUs offer one of the most comprehensive, factory-packaged, open protocol controls systems available. Controls are engineered, mounted, wired and tested before leaving the factory to reduce installation time and expense, as well as to ensure system consistency and reliability. Factory-mounting reduces the leakage problems that can occur when controls are mounted on site. You will also have the assurance of single-source accountability without the risk of compromising casing integrity by mounting controls on site.

Questions?

Our customers are backed by the largest team of engineers, account managers and service technicians in the industry. Trane is just a call or click away to provide the ongoing support and consultation you need, leveraging deep systems knowledge to not only optimize the performance of your air handler, but your entire HVAC system.
