

# VariTrane<sup>®</sup> Single Duct Unit VAV

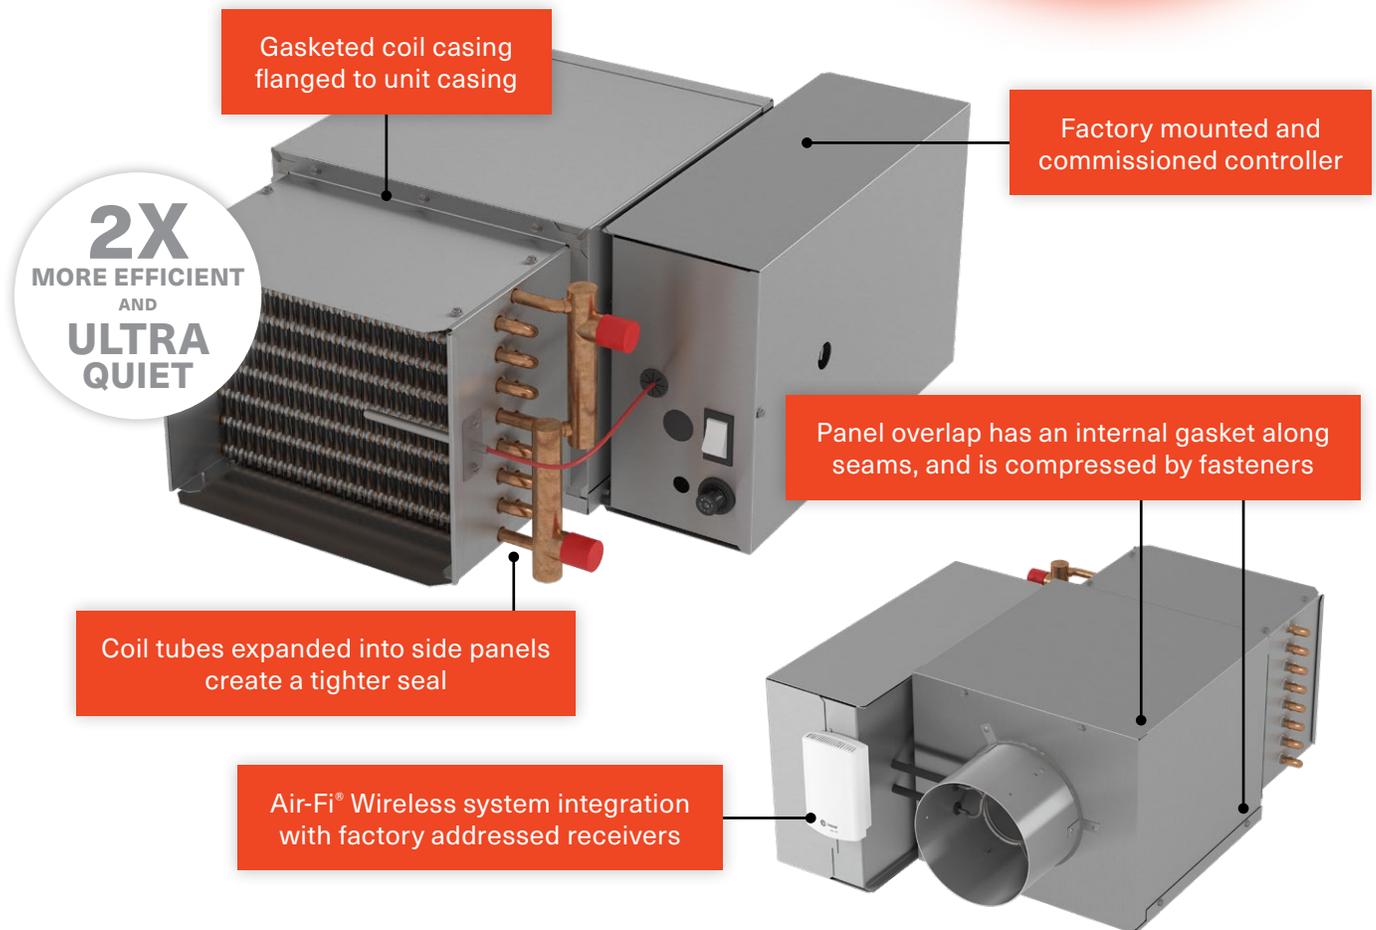

The leader in efficiency *and* acoustics

VariTrane is now certified among the quietest single-duct VAVs on the market with less than half the air leakage of the closest competitor. And we stand behind our certification results!

## Air flows quietly—and reliably—to maintain comfort and air quality

Moving air through the HVAC system to manage thermal comfort and indoor air quality creates acoustical challenges. Air gets noisy when it squeezes through seams and gaps. VariTrane<sup>®</sup> reduces sound at the VAV by significantly reducing the places where air can escape. **The result is an HVAC system that is a quieter, more efficient and sustainable solution that costs less to operate.**

## Improved Indoor Air Quality

Minimizing cold supply air leakage reduces the risk of condensation that could lead to mold growth within the space. VariTrane® reliably delivers the proper amount of primary air/supply air to each zone during all operating conditions.

## Tested and Certified Acoustical Performance

Sound performance has been thoroughly tested and certified in Trane's advanced acoustics testing lab in accordance with AHRI Standard 880. Additional factory testing verifies proper unit operation including occupied/unoccupied airflow and temperature setpoints, communication link functionality, and output device functionality.

## Factory Commissioned Controls (optional)

**Trane is the only manufacturer to offer factory mounting and *commissioning* of unit controllers.**

Commissioning means pre-engineered algorithms that are programmed and tested *before* the unit leaves the factory. This allows customers to standardize the VAV control strategies for ventilation, fan pressure, start-stop and more—while significantly reducing the amount of labor and programming that's required to complete a job. Every unit operates with our best-known sequences for optimizing efficiency, quality and reliability. Combining Trane factory installed and commissioned controls with our Air-Fi® Wireless solution improves the user experience by providing the most efficient, quiet, “plug- and-play” VAV box on the market today.

## Best in class in every category

- Outstanding certified sound performance
- Lowest air leakage rate in the industry
- Factory commissioned digital controls
- Reduced energy consumption and operating cost

## Product Specs and Options

- Available Sizes:
  - 4 in. to 16 in. round, 24 in. x 16 in. rectangular
- Airflow Range: 0 – 8,000 cfm
- Available with hot water or electric reheat
- Optional Certified Ultra-Low Air Leakage
- Optional LEED® wrap for preventing contamination during the construction phase
- Optional factory mounted, wired, and commissioned pressure independent controls
  - BACnet® Communication
  - Trane® Air-Fi® Wireless Communication
