## Variable Refrigerant Flow (VRF) System Air Source Heat Pump and Heat Recovery Outdoor Units

4TVH/4TVR0072-0192 Single Unit Modules  
4TVH/4TVR0216-0528 Multi-Unit Modules

## Introduction

Trane® variable refrigerant flow (VRF) systems are efficient, effective, reliable heating and cooling solutions that you can trust. VRF is well suited for historic buildings without existing ductwork, as well as schools and mid-rise office buildings with multiple interior spaces and diverse occupancy rates. When VRF is the right solution for your application, Trane will help you ensure that it is the best solution.

Trane VRF systems are designed for exceptional energy efficiency, offering industry-leading performance up to 38.20 IEER and 34.10 SCHE. Trane VRF systems utilize inverter compressors (some model feature dual compressors) with vapor injection for improved performance and comfort.

Systems are available for both heat pump and simultaneous heating and cooling operation. Both feature individual zone control to provide individual occupant comfort. The simultaneous heating and cooling models offer the ability to heat and cool adjacent zones, intelligently exchanging energy between them through strategically located mode control units.

Indoor units are available in a wide variety of configurations and capacities, allowing architects the flexibility to satisfy almost any design requirement.

Trane offers a complete line-up of controls to complete your VRF installation. These range from easy to use individual zone controls to centralized systems for building monitoring and control, as well as optional BACnet® connectivity for centralized Trane Tracer™ integration.

## Revision History

Revisions include the following:

- Added 14 and 16 ton single modules.
- Updated system combinations to include new 14 and 16 ton modules (where applicable).
- Increased maximum system capacity to 44 tons.

## System Features

- Individual modules are available as standard heat pump or simultaneous heating and cooling (heat recovery) configuration; units can be combined as double or triple modules for larger capacity requirements.
- 3rd generation compressor technology features all inverter compressors for superior efficiency and reliability.
- Asymmetric scroll is designed to minimize frictional loss.
- Dual inverter compressors (available in many models) are designed to equally share load for higher reliability.
- Improved vapor injection system increases refrigerant flow rate up to 20% for superior heating performance.
- Intercooler uses a plate heat exchanger for improved heating and cooling efficiency.
- 8,400 RPM (maximum speed) compressors assures quick start cooling and heating performance.
- Auto oil balancing eliminates the need for an oil balancing pipe.
- Compressor inverter drives are liquid cooled for improved reliability.
- Longer pipe lengths are the result of large oil storage capacity and low oil circulation rate.
- Total harmonic distortion is reduced through adaptive sine wave control.
- Refrigerant pump down and pump out facilitates maintenance and repair.
- Automatic refrigerant balancing between indoor units optimize refrigerant distribution for better comfort and performance.
- Optional quiet operation mode for reduced sound levels at night.
- Auto snow blowing function removes accumulated snow when conditions require it.
- Special hydrophilic heat exchanger coating minimizes frost build up on the outdoor coils and facilitates the defrost cycle.
- Anti-corrosion finish provides added protection in harsh environments.
- Four and six port mode control units are light and compact. Distributed installation flexibility provides superior performance during simultaneous heating and cooling operation.
- VRF systems feature self-diagnosis, including system monitoring and error code reporting.

# Model Number Description

**DIGIT 1 = Refrigerant**

4 = R-410A

**DIGIT 2 = Brand name**

T = Trane

**DIGIT 3 = System type**

V = Variable Refrigerant Flow

**DIGIT 4 = Functional type outdoor unit**

H = Heat Pump, DC Inverter (VRF)

R = Heat Recovery (three pipe), DC Inverter

**DIGIT 5 = Special application**

0 = Standard

**DIGIT 6, 7, 8 = Nominal capacity (Btu/h x 1,000)**

072 = 72,000 Btu/h (VRF)

096 = 96,000 Btu/h (VRF)

120 = 120,000 Btu/h (VRF)

144 = 144,000 Btu/h (VRF)

168 = 168,000 Btu/h (VRF)

192 = 192,000 Btu/h (VRF)

**DIGIT 9 = Major development sequence**

B = Second development sequence

**DIGIT 10 = Electric power supply characteristics**

3 = 208–230/60/3

4 = 460/60/3

**DIGIT 11 = Reserved for future use**

0 = Not currently used

**DIGIT 12 = Miscellaneous digit**

0 = Not currently used

**DIGIT 13 = Region of sale**

N = North America (VRF)

**DIGIT 14 = Minor design sequence**

A = First design sequence

B = Second design sequence

C = Third design sequence

**DIGIT 15 = Service digit (not used for ordering)**

A = First sequence

B = Second sequence

**Notes:**

- Nominal capacity based on 25 ft (7.6 m) of equivalent refrigerant piping with 0 ft level difference.
  - Cooling:** Indoor temperature 80°F DB, 67°F WB/Outdoor temperature 95°F DB, 75°F WB
  - Heating:** Indoor temperature 70°F DB, 60°F WB/Outdoor temperature 47°F DB, 43°F WB
- Rated per AHRI-1230 Standard conditions
- Actual length (equivalent length in parenthesis)
- If the outdoor unit is installed above the indoor unit, the allowable height difference is 361 ft (110 m). If the outdoor unit is installed below the indoor unit, the allowable height difference is 131 ft (40 m).
- Sound pressure was acquired in a dead room. Actual noise level may be different depending on installation conditions.
- Cooling operation between 23°F and 5°F requires twin porting of the applicable indoor units.

Power Supply		208–230/60/3		
Nominal Tons		38.0		
System Type		Ducted	Ducted	Ducted
		Non-Ducted	Non-Ducted	Non-Ducted
Operating Temp Range	Cooling <sup>6</sup>	5 to 120	5 to 120	5 to 120
	Heating	-13 to 75	-13 to 75	-13 to 75

**Notes:**

- Nominal capacity based on 25 ft (7.6 m) of equivalent refrigerant piping with 0 ft level difference.
  - Cooling:** Indoor temperature 80°F DB, 67°F WB/Outdoor temperature 95°F DB, 75°F WB
  - Heating:** Indoor temperature 70°F DB, 60°F WB/Outdoor temperature 47°F DB, 43°F WB
- Rated per AHRI-1230 Standard conditions
- Actual length (equivalent length in parenthesis)
- If the outdoor unit is installed above the indoor unit, the allowable height difference is 361 ft (110 m). If the outdoor unit is installed below the indoor unit, the allowable height difference is 131 ft (40 m).
- Sound pressure was acquired in a dead room. Actual noise level may be different depending on installation conditions.
- Cooling operation between 23°F and 5°F requires twin porting of the applicable indoor units.

Operating Temp Range	Cooling <sup>6</sup>	5 to 120	5 to 120	5 to 120	5 to 120
	Heating	-13 to 75	-13 to 75	-13 to 75	-13 to 75

**Notes:**

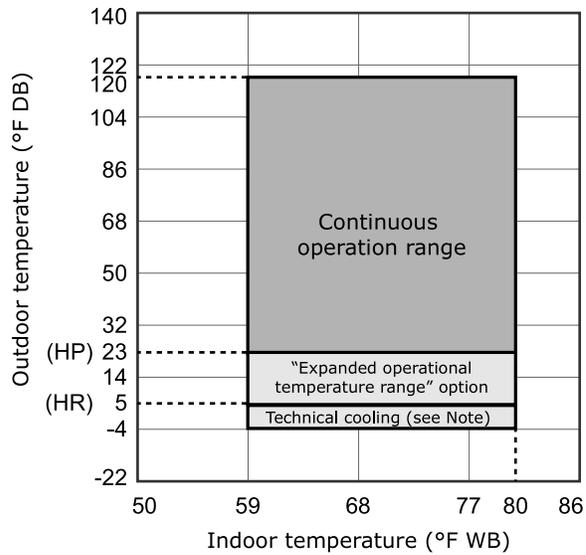

- Nominal capacity based on 25 ft (7.6 m) of equivalent refrigerant piping with 0 ft level difference.
  - Cooling:** Indoor temperature 80°F DB, 67°F WB/Outdoor temperature 95°F DB, 75°F WB
  - Heating:** Indoor temperature 70°F DB, 60°F WB/Outdoor temperature 47°F DB, 43°F WB
- Rated per AHRI-1230 Standard conditions.
- Actual length (equivalent length in parenthesis).
- If the outdoor unit is installed above the indoor unit, the allowable height difference is 361 ft (110 m). If the outdoor unit is installed below the indoor unit, the allowable height difference is 131 ft (131 m).
- Sound pressure was acquired in a dead room. Actual noise level may be different depending on installation conditions.
- Refer to the "Outdoor Unit Operation Limits" section of this document.
- Requires two each 4TDK3819B0000A and 4TDK3100B0000A outdoor unit Y-joint connections.

# Outdoor Unit Operation Limits

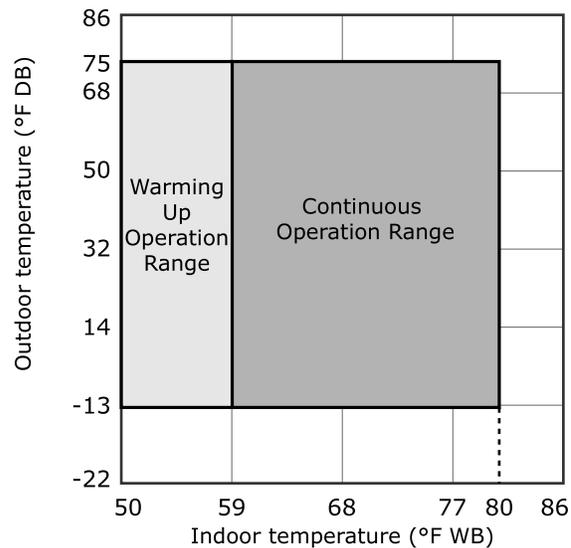

**Notes:**

- For Figure 1, p. 82 and Figure 2, p. 82, it is recommended that a wind/snow prevention duct be used for outdoor units that produce cooling or heating below an ambient temperature of 23°F (-5°C).
- For Figure 1, p. 82:
  - Expanded operational temperature range applies to heat recovery systems. Cooling operation between 23°F (-5°C) and 5°F (-15°C) requires twin porting of the applicable indoor units (18 MBH indoor units and above).
  - Technical cooling applies only to heat recovery systems. Technical cooling requires that the system be operating in heating mode with heating demand equal or greater than cooling demand.

**Figure 1. Cooling**

**Figure 2. Heating**

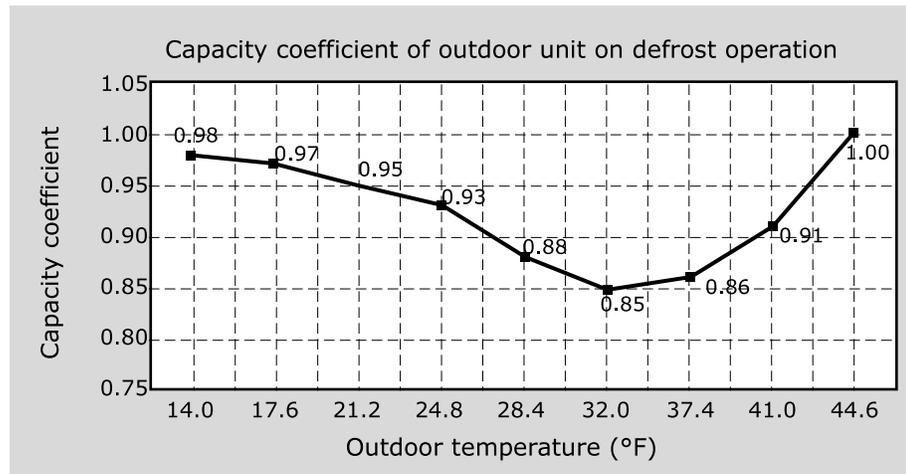

## Defrosting Correction Factor

In heating operation, frost can be formed on heat exchanger according to outdoor temperature. (frost on heat exchanger results in decreasing the performance.) To remove frost on heat exchanger of outdoor unit, defrost operation is carried out periodically. During defrost operation, capacity of outdoor unit may decrease. The decrement is not considered to the individual capacity tables.

Outdoor temperature (°F, WB)	14.0	17.6	21.2	24.8	28.4	32.0	37.4	41.0	44.6
Capacity coefficient	0.98	0.97	0.95	0.93	0.88	0.85	0.86	0.91	1.00

Units: inches (mm)

A: Optional condenser air discharge duct and/or snow hood  
 B: Optional wind/snow baffle

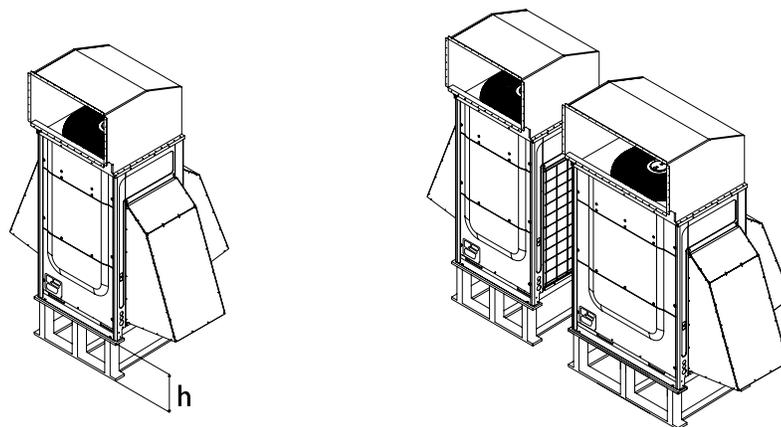

## Wind/Snow Baffle Installation (optional)

A wind/snow baffle should be installed:

- To prevent snow from accumulating on the outdoor unit and the risk of accumulated frost, which may interfere with normal heating operation.
- To protect the unit from humid air, such as near a sea shore.
- For heat recovery applications requiring the use of low ambient cooling (below 23°F [-5°C]).
- For applications requiring the use of low ambient heating (below 23°F [-5°C]).

Install the baffle so that:

- The discharge air and prevailing wind are not going the same direction.
- The discharge air is not directed to the enclosed area.
- The height (**h**) of the frame or base should be a minimum of 12 inches plus the additional height of the heaviest expected snowfall. (Example: If the base height is the minimum 12 inches and the heaviest expected snow load is 6 inches, then **h** = 12 inches + 6 inches = 18 inches).

Trane optimizes the performance of homes and buildings around the world. A business of Ingersoll Rand, the leader in creating and sustaining safe, comfortable and energy efficient environments, Trane offers a broad portfolio of advanced controls and HVAC systems, comprehensive building services, and parts.
