

Trane Service Agreement Funding Option

Worry-free funding for planned maintenance and upgrades

No matter how well you plan for equipment service and upgrades, budgeting and payment can quickly become complicated. Multiple projects, each with its own approval process, timeframe and cash requirements may force you to compromise on what needs to be done. Problem solved.

The Benefits

A funding solution that takes the long view

The Trane Service Agreement Funding Option plans ahead for multiple projects over multiple years in addition to regular maintenance as part of your service agreement. These may include upgrades to take advantage of new functionality or energy savings, or projects that increase capacity to meet future demand. Regardless of what you need to accomplish, your plan is funded.

Keeping things simple

You can avoid clashes between your equipment needs and your monthly operating budget. You can also avoid going through endless loan approvals. The Funding Option is designed to include everything from controls upgrades to overhauls—even R'newal™ service program projects—all planned ahead of time and approved only once.

When you need it: funding for projects, upgrades and overhauls

The Smart Funding Solution

How It Works

A predictable budget

Your Trane account manager helps you create a detailed equipment plan and establish a monthly budget that covers all maintenance and planned upgrades, timing them so they will be most advantageous for your budgets year over year.

Flexibility, too

Let's say your project expense is concentrated in one time period and you exceed the funds in your reserve account. Don't worry. With preapproval, the funding option will cover a temporary shortfall without interest. Similar to overdraft protection for a checking account, this plan keeps you on budget while moving your projects forward.
